MENTAL HEALTH COUNSELING COMPREHENSIVE EXAM

The Mental Health Counseling Comprehensive Exam is a four hour written exam assessing the students' ability to apply theoretical concepts to clinical case material. Students will be presented a clinical vignette and be asked to draw on the knowledge and skills they have obtained throughout the course of their graduate studies and practicum experiences. Students will be graded based upon their ability to demonstrate and apply theoretical knowledge and express themselves clearly on paper. Students may handwrite the exam or use Microsoft Word on the University’s computer. Grading will be blind by two graduate faculty members, and results will be returned within six weeks. Students are advised to prepare well in advance, to work in groups, and to have their coordinator review their work, prior to test time. Students may take the exam twice.
